

MULTIBLENDS

RIGID VINYL COMPOUNDS

August 22, 2007

Mr. Carl Anderson
Alum-A-Pole Corporation
1011 Capouse Ave.
Scranton, PA 18509

Dear Carl:

I have enclosed a copy of the test report generated by Precision Testing Laboratories which officially gives the fabric used as a mask for the Sun Tamer hat a UPF Label of 50+, the highest rating achievable using test method AATCC 183. You can see in the report that the blockage of UVA and UVB Rays is very nearly 100%. This confirms that there is virtually no transmission of light in this wavelength.

The UPF classification system is as follows:

<u>UPF Rating</u>	<u>UV Protection</u>	<u>UV Blocked</u>
15, 20	Good Protection	93.3% to 95.8%
25, 30, 35	Very Good Protection	95.9% to 97.4%
40, 45, 50, 50+	Excellent Protection	>97.5%

Most outdoor apparel sold designates this UPF rating.

I am enclosing a tag from an Adidas golf shirt I recently got which shows it to have a UPF rating of 15+. On the back is a grid similar to the one I have generated in this letter. Maybe you could get some labels or tags made which highlight these excellent UV protection results.

Please call me with any questions or comments.

Respectfully,

Peter J. Vanderpool
